

# CryptoPredicted beta

## Getting started guide

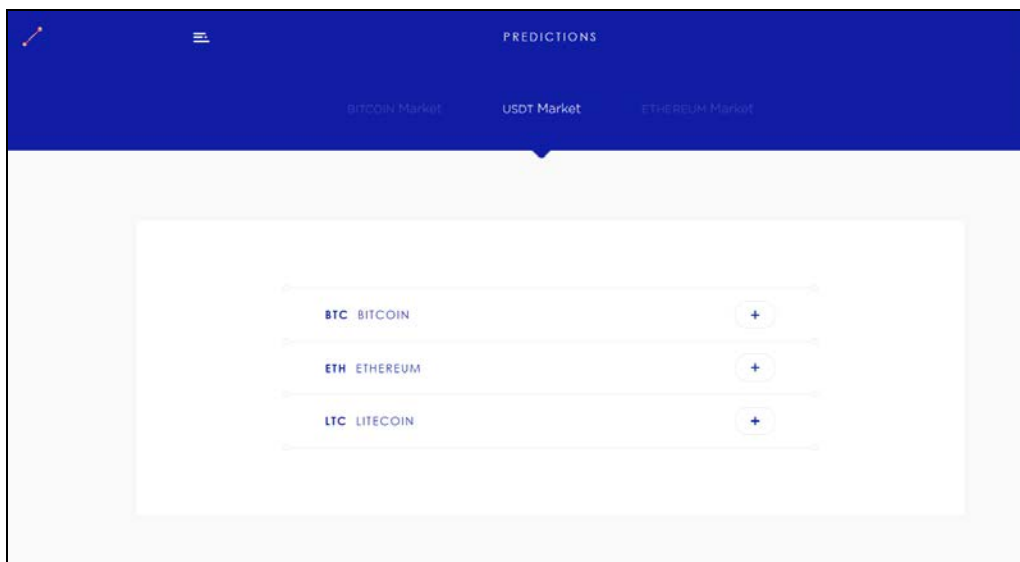

Thank you for signing up on CryptoPredicted ☺ In this guide I will briefly introduce our features and what you can do with them.

### Sign up and Login

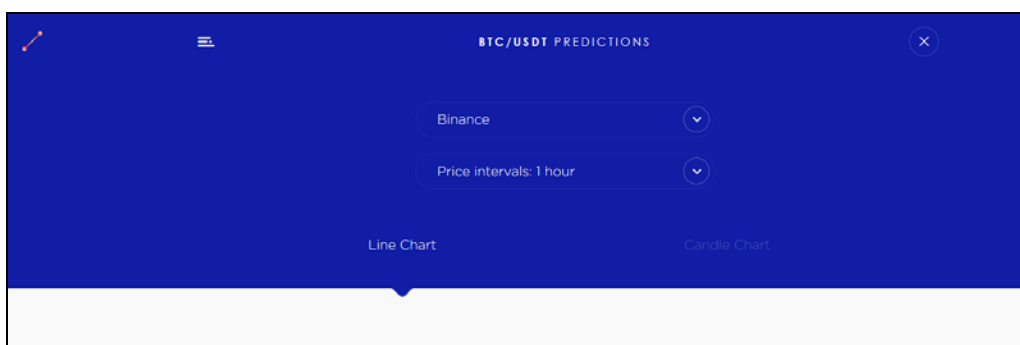

I assume you have already created a new account, verified your email and logged in.

### Predictions

On the “Predictions” page you can select your preferred crypto market. Right now we only have the USDT market available which contains three coins: BTC, ETH and LTC:

By clicking on any of these (e.g. BTC) we are sent to a new page (price predictions). At the top you have the “filter” area where you can select your exchange (right now only Binance is supported) and the price interval (e.g. 10minutes or 60minutes):

Below the filters you can choose to view the “Line chart” or the “Candle chart”. And below that you have the chart itself with the predictions. The predictions (when in real-time mode) are updated automatically every 10 seconds:

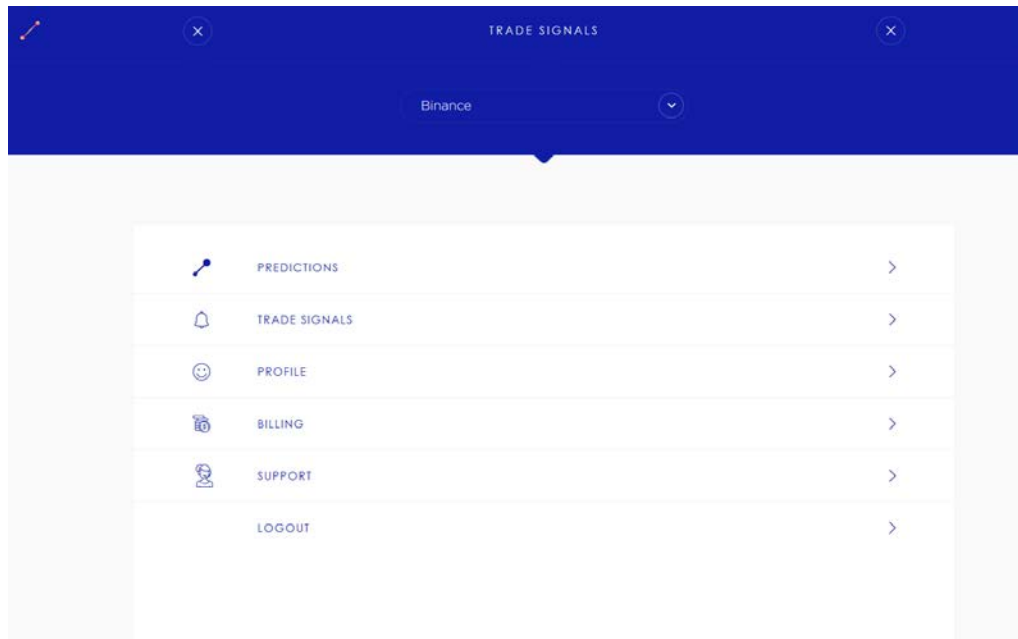

You may also use the “prev”/”next” buttons to go back and look at previous predictions:

## Trade signals

Let us now go to the trade signals page (use the top left menu icon to navigate):

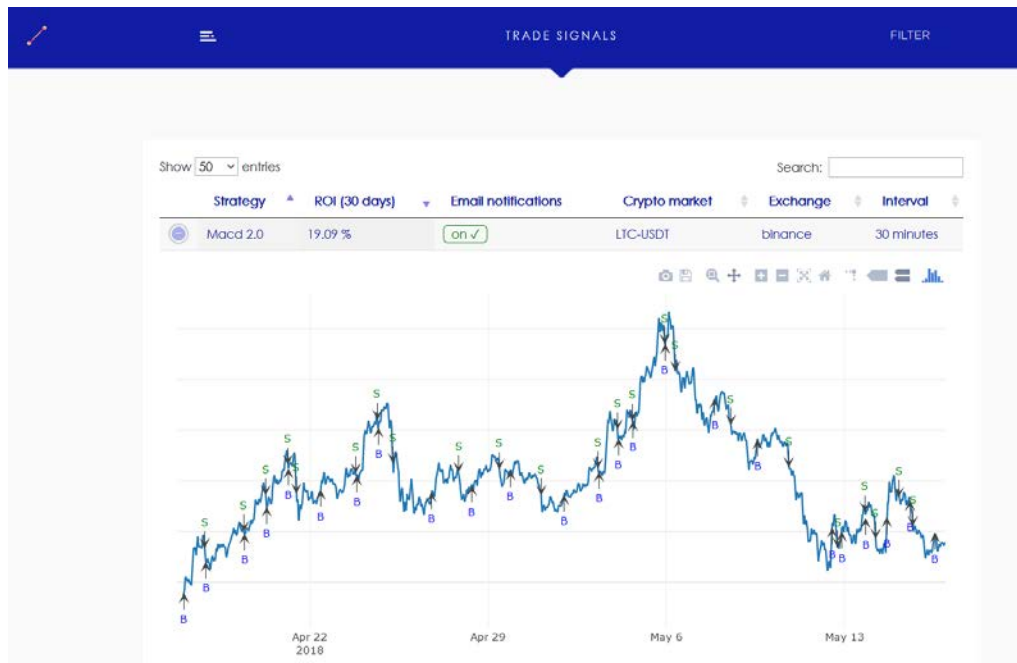

On this page you will be shown a bunch of different trading strategies, their ROI and some specifics. Once again you can use the filter to configure your exchange (right now only Binance is supported).

The screenshot shows the 'TRADE SIGNALS' page with a dark blue header. The main content area displays a table of trading strategies. The table has columns for Strategy, ROI (30 days), Email notifications, Crypto market, Exchange, and Interval. The 'Email notifications' column contains green 'on ✓' or red 'off' labels. The 'Exchange' column shows 'binance' for all entries. The 'Interval' column shows '30 minutes' or '60 minutes'. A search bar is located at the top right of the table area.

Strategy	ROI (30 days)	Email notifications	Crypto market	Exchange	Interval
Macd 2.0	19.09 %	on ✓	LTC-USDT	binance	30 minutes
Macd 2.0	12.40 %	on ✓	LTC-USDT	binance	60 minutes
Macd 1.0	10.90 %	on ✓	LTC-USDT	binance	30 minutes
Pstls 1.1	9.96 %	on ✓	BTC-USDT	binance	60 minutes
Macd 2.0	6.47 %	off	BTC-USDT	binance	60 minutes
Macd 1.0	5.54 %	off	LTC-USDT	binance	60 minutes
Pstls 1.0	3.71 %	off	BTC-USDT	binance	30 minutes
Voltra 1.0	1.02 %	off	LTC-USDT	binance	30 minutes
Macd 2.0	0.58 %	off	BTC-USDT	binance	30 minutes
Macd 1.0	-0.12 %	off	BTC-USDT	binance	30 minutes
Pstls 1.0	-0.91 %	off	LTC-USDT	binance	30 minutes
Voltra 1.0	-2.52 %	off	BTC-USDT	binance	30 minutes
Voltra 1.0	-2.65 %	off	BTC-USDT	binance	60 minutes
Pstls 1.1	-4.29 %	off	LTC-USDT	binance	60 minutes

By clicking on the “plus” icon next to some Strategy, the row will expand and load all the Buy/Sell signals for that specific strategy in the past 30 days. If you wish to be notified (by email) when a new signal is generated simply click the button in the “Email notifications” column to turn it on.

## What's next

Every week or every two weeks we will be adding new features:

- More coins (XRP, BCC, ...) for different markets (ETH & BTC) – for predictions and signals.
- More exchanges (Coinbase, Coincheck, Bitfinex, Kraken, ...).
- More trading algorithms.
